Conclusion {#s4} ===== The ultimate responsibility for people's health lies with individuals, families, communities and governments. Public health is a shared responsibility. The public can only expect health professionals to understand the nature of their role and that they are expected to have knowledge of the factors that can influence health and wellbeing, be able to identify individual, family and community needs and be competent to deliver quality healthcare. The role of

the health professional is much broader than simply delivering clinical care. As healthcare evolves and the range of services required to meet the needs of a population increases, it is essential that health professionals are able to provide evidence-based care. Health professionals are expected to be at the forefront of healthcare by being knowledgeable of the latest evidence-based practice and be able to use this to inform their clinical practice. They are expected to assess their knowledge and skills, develop their clinical practice and continually review their practice to ensure that it is evidence-based. As health professionals, our roles are

evolving from those who are merely responsible for patients' medical care to those who are also able to make recommendations about community and population health strategies. It
