AutoCAD Activation Code X64 [Latest-2022]

The name AutoCAD means "Automatic CAD". AutoCAD is a program that uses the industry standard BNF (branching-network-file) notation to create and manipulate graphics, which typically include geometric data and associated attributes. AutoCAD is used to create and edit drawings, which are used for architectural, engineering, technical and industrial projects, and also for maintenance and repair documentation and technical illustrations. Graphical Functionality Objects are represented in AutoCAD as geometric entities called "components", which can be modified, oriented, and arranged in complex ways. These elements form the framework of the drawing, and allow other elements to be inserted or merged to form a design. It is possible to create and edit a drawing as a whole or in separate entities, and then stitch or "glue" the pieces together to finish the drawing. Typically, the objects in a drawing are organized in layers. A "layer" is a system of drawing elements that are attached to the surface of the page. Layers, like components, can be arranged and merged to create complex, sophisticated drawings. A feature of AutoCAD known as "on-the-fly" is used to create complex graphics in which an object can be edited while it is being displayed. This enables the user to create complex, dynamic graphics without having to load the entire file into memory before starting to edit. A drawing can be saved for later viewing, printing, and further editing. Text and special symbols can also be added. It is possible to create a small digital model of a building, to modify it and use the model to create a visual representation of the building. AutoCAD can be used to do the same thing with other types of projects: electrical wiring, plumbing, heating systems, pipe networks and elevators. History AutoCAD was the result of a collaboration between the Graphic Design Division of the National Center for Supercomputing Applications (NCSA) at the University of Illinois and Hewlett-Packard to develop a commercial CAD program for the HP-65 line of microcomputers, which were first introduced in 1978. The development team at the University of Illinois were using draftspersons, individuals who were professionally trained to draw by hand. At the time, this was the accepted method of design. However, since this was an academic environment, there were not enough personnel to create the necessary number of drawings. Since the academics in Illinois
