windows 8 is essentially a full proof of concept and nothing less than a joke. it has never been successfully activated, and microsoft has always been focusing on the latest windows 10 anniversary update rather than granting consumers the right to give the middle finger to microsofts business model by removing the one thing that keeps them in the middle. its rather amusing to see what is being promoted as an upgrade to windows 10 to this days. we have tested this tool and it seems to be working just fine for us. we did however, expect some errors in the process of activation, but that was not the case. the tool seems to simply work on its own and did not required any input from our side. you do need to have a burning desire to get rid of the time bomb that microsoft has installed in windows 8 in order to use this tool. it's recommended that you reboot, prior to using this tool. if you do not, you will likely be presented with a bunch of error codes when using the tool. once you reboot, run the tool and follow the few simple instructions in the tool to complete the activation process. the tool is available in two versions, the first one being free and the other being a paid version. its highly recommended that you download the free one, so you do not have to worry about installing files on the computer you wish to activate. you can install the software on any other computer without any problems. since the tool is so new and untested, it is recommended that you perform a test run first. having said that, there are no possible side effects that we've found yet. the tool also has two modes, one is for removing the timebomb and the other is for restoring the image to its original state.

Windows 8 Build 7850 KMS Activator And Timebomb Remover 0.9.4.0

with windows 8 build 7850 kms activator and timebomb remover it will be possible to activate the pre-installed windows 8 build. activation is a lengthy process that takes a lot of time, especially if the activation code is stolen as with windows 10 beta and windows 10 public, which no longer have any limits on the minimum number of activation attempts. windows 8 build 7850 has new limits on the number of days of validity that are guaranteed and it will be possible to extend it and remove the time bomb with the help of this tool. the tool works through proxies, allowing you to change the location of the microsoft activation servers, which are responsible for windows activation. the ability to use proxies can help bypass all the activation limitations in windows 8, thus allowing you to install windows 8 build 7850 for infinite days without any problems. kms activator removes activation restrictions from the build of windows 8 that you choose, allowing you to upgrade to build 7850. the process is simple and can be done in a couple of minutes. once the process is complete, the activation time limit is extended from 90 days to 365 days, effectively removing the time bomb found in build 7850. the tool does not require an internet connection and does not overwrite windows 8 build 7850 even if the updates are downloaded. the tool can also be run in safe mode if windows 8 build 7850 is pre-installed or if it has become non-bootable for any reason. the tool has a lot of options to configure in order for it to work with your pc. if the tool is not successful in fixing your problem, all you need to do is move on to the next step and try a different combination of options. once the tool finds the time bomb present in the build of windows 8, you can select to remove it. 5ec8ef588b
