nothing special about it but you have the possibility to create a bootable usb with any windows 10 installation for windows 10, windows 8, or windows 7. the install.wim image is compressed in 4.8 gb so it will probably take a while to create it. you have to install the latest version of microsoft windows. google "how to create bootable usb in windows 8/10/7/8.1" for more details on that. the iso file is over 3 gb in size so it will probably take a while to get it. for that reason, we have put it into the torrent, so that you can download it in a minute and upload it via torrent. this file is divided into 7 parts, with the last one (the 7th part) being the install.wim file. the torrent of the whole thing is here:http://www.nyaa.se/torrent/4efb8029fc82dccc6edd7c20c49becb1/ghost_windows_xp_sp2_professional_english_x86_rarengish.torrent (70:34)german torrent (2:37)polish torrent (1:50)spanish torrent (3:01) the torrent of all parts are here:http://www.nyaa.se/torrent/be7717360ba385e6da3587370c636308/ghost_windows_xp_sp2_professional_english_x86_version_7_parts_1_2_rarengish.torrent (66:28)german torrent (1:39)polish torrent (2:12)spanish torrent (3:21) windows 2000 was a modernization of windows nt 4.0 which brought many of the desktop changes, including active desktop, to microsoft's windows nt line. four editions of windows 2000 were released, professional, server, advanced server, datacenter server. improvements over nt 4.0 include new accessibility options, increased language and locale support, ntfs 3.0, the encrypting file system and active directory. windows 2000 was first planned to replace both windows 98 and windows nt 4.0 although using the nt kernel for consumer and professional editions would not happen until windows 2000's successor, windows xp.

please note that this is a 64-bit version of the product and that the official windows 10 build for this has not yet been released. therefore, this build of ghost spectre will only work if your windows 10 developer preview is 32 bit. windows xp home 64-bit sp2 standard is 32 bit only, and while windows 10 runs on a 64-bit platform, it is not a 64-bit version of windows. in other words, windows 10 is not technically a 64-bit version of windows. once you've downloaded ghost spectre, the openelec image is only 32-bit and should not cause problems. however, microsoft windows 7 and windows 8.1 have requirements on the drive size that need to be met before a windows installation is successful. the free download of ghost spectre will not address these requirements for windows 7 and 8.1, but for your own safety and the safety of others using your computer, it is recommended you install ghost spectre with at least a 200 mb free drive space. you can consider buying norton ghost if you would like to take a backup of your system. alternatively, if you already have norton ghost installed in windows, you may be able to carry out a system recovery process. both the steps can be used to create an image or image file of your computer system. this is why this method becomes a useful tool to protect your system against hardware failures. before you can perform the install, the following hardware and software requirements must be installed and configured: cpu: the system must support hardware-assisted virtualization. for more information on the supported cpu models, see the hardware requirements table. 5ec8ef588b
